

THE FOREST FEDERATION

Information and Communications Technology (ICT) Security Policy

Introduction

We are managing a significant investment in the use of ICT using a 4 year complete replacement programme to ensure all hardware is compatible and up to date. In all areas of work, teaching and learning, school leadership and management, the use of ICT is vital and must be protected from any form of disruption or loss of service. It is therefore essential that the availability, integrity and confidentiality of the ICT systems and data are maintained at a level that is appropriate for our needs. Sufficient resources are allocated each year to ensure the security of the school's ICT systems and to enable users to comply fully with the legal requirements and policies covered in this Policy. If insufficient resources are available to fully implement this policy, then the potential risks must be documented and reported to Governors.

Policy Objectives

Against this background there are three main objectives of the ICT Security Policy:-

- a) to ensure that equipment, data and staff are adequately protected on a cost-effective basis against any action that could adversely affect the school;
- b) to ensure that users are aware of and fully comply with all relevant legislation;
- c) to create and maintain within the school a level of awareness of the need for ICT security to be an integral part of the day to day operation so that all staff understand the need for ICT security and their own responsibilities in this respect.

Application

The ICT Security Policy is intended for all school staff who have control over or who use or support the school's administration and curriculum ICT systems or data. Pupils using the school's ICT systems or data are covered by the relevant 'Rules for ICT Users' and 'E-mail and Internet Use Good Practice' documents, which are incorporated within this policy.

For the purposes of this document the terms 'ICT' (or 'ICT system'), 'ICT data' and 'ICT user' are defined as follows:-

- 'ICT' (or 'ICT system') means any device for automatic storing and processing of data and includes mainframe computer, minicomputer, microcomputer, personal computer (whether hand-held laptop, portable, stand-alone, network or attached to a mainframe computer), workstation, word-processing system, desk top publishing system, office automation system, messaging system or any other similar device;
- 'ICT data' means any information stored and processed by ICT and includes programs, text, pictures and sound;
- 'ICT user' applies to any County Council employee, pupil or other authorised person who uses the school's ICT systems and/or data.

Scheme of Delegation under the ICT Security Policy

The ICT Security Policy relies on management and user actions to ensure that its aims are achieved. Consequently, owner, corporate and individual levels of responsibility for ICT security are clearly defined below.

Owner

The owner has the legal title to the property. In this respect, all software, data and associated documentation produced in connection with the work of the school are the legal property of the County Council, which will normally hold it for the benefit of the school.

Exceptions to this will be allowed for software and documentation produced by individual Teachers for lesson purposes – this includes schemes of work, lesson plans, worksheets or as otherwise agreed in writing by the Headteacher.

We also use software and data that are the legal property of external organisations and which are acquired and used under contract or licence.

Governing Body

The governing body has ultimate corporate responsibility for ensuring that the school complies with the legislative requirements relating to the use of ICT systems and for disseminating policy on ICT security and other ICT related matters. In practice, the day-to-day responsibility for implementing these legislative requirements rests with the Headteacher.

Headteacher

The Headteacher is responsible for ensuring that the legislative requirements relating to the use of ICT systems are met and that the school's ICT Security Policy, as may be amended from time to time, is adopted and maintained by the school. The Headteacher is also responsible for ensuring that any special ICT security measures relating to the school's ICT facilities are applied and documented as an integral part of the Policy.

The Headteacher is also responsible for ensuring that the requirements of the Data Protection Act 1998 are complied with fully by the school. This is represented by an on-going responsibility for ensuring that the :-

- registrations under the Data Protection Act are up-to-date and cover all uses being made of personal data and registrations are observed with the school.

In addition, the Headteacher is responsible for ensuring that users of systems and data are familiar with the relevant aspects of the Policy and to ensure that the appropriate controls are in place for staff to comply with the Policy. This is particularly important with the increased use of computers and laptops at home. Staff should exercise extreme care in the use of personal data at home to ensure legislation is not contravened, in particular the Data Protection Act 1998..

System Manager

The 'System Manager' is responsible for the school's ICT equipment, systems and data and will have direct control over these assets and their use, including responsibility for controlling access to these assets and for defining and documenting the requisite level of protection. The System Manager will be an employee of the school or the County Council. Consequently, the System Manager will administer the practical aspects of ICT protection and ensure that various functions are performed, such as maintaining the integrity of the data, producing the requisite back-up copies of data and protecting the physical access to systems and data. In line with these responsibilities, the System Manager will be the official point of contact for ICT security issues and as such is responsible for notifying the Headteacher or Chair of Governors of any suspected or actual breach of ICT security occurring within the school. The Headteacher or Chair of Governors should ensure that details of the suspected or actual breach are recorded and made available to Internal Audit upon request. The Headteacher or Chair of Governors must advise Internal Audit of any suspected or actual breach of ICT security pertaining to financial irregularity.

It is vital, therefore, that the System Manager is fully conversant with the ICT Security Policy and maintains an up to date knowledge of best practice and follows the associated approved practices.

Internal Audit

The County Council's Internal Audit Section is responsible for checking periodically that the measures prescribed in each school's approved ICT Security Policy are complied with, and for investigating any suspected or actual breaches of ICT security. Specialist advice and information on ICT security may be obtained from the County Council's ICT Unit, who will liaise with Internal Audit on such matters.

Users

All users of the school's ICT systems and data must comply with the requirements of this ICT Security Policy, the relevant rules of which are summarised in 'The Rules for ICT Users' found in this policy. Users are responsible for notifying the System Manager of any suspected or actual breach of ICT security. In exceptional circumstances, users may report any such breach directly to the Headteacher, Chair of Governors or to Internal Audit.

The Legislation

Background

The responsibilities referred to in the previous sections recognise the requirements of the current legislation relating to the use of ICT systems, which comprise principally of :-

- Data Protection Acts 1984 & 1998;
- Computer Misuse Act 1990;
- Copyright, Designs and Patents Act 1988
- The Telecommunications Act 1984

It is important that all staff are aware that any infringement of the provisions of this legislation may result in disciplinary, civil and/or criminal action.

The general requirements arising from these acts are described below.

Data Protection Acts 1984 & 1998

The Data Protection Act exists to regulate the use of computerised information about living individuals. To

be able to meet the requirements of the Act, the Headteacher is required to compile a census of data giving details and usage of all relevant personal data held on computer within the school and file a registration with the Data Protection Registrar. It is important that amendments are submitted where the scope of the system extends to new areas of operation. The 1998 Act is consistent with the principles established in the 1984 Act, but extends the regulation to certain manual records as well as computerised information. It is important that all users of personal data are aware of, and are reminded periodically of, the requirements of the act and, in particular, the limitations on the storage and disclosure of information. Failure to comply with the provisions of the prevailing Act and any subsequent legislation and regulations relating to the use of personal data may result in prosecution by the Data Protection Registrar.

Computer Misuse Act 1990

Under the Computer Misuse Act 1990 the following are criminal offences, if undertaken intentionally:-

- Unauthorised access to a computer system or data;
- Unauthorised access preparatory to another criminal action;
- Unauthorised modification of a computer system or data.

All users must be given written notice that deliberate unauthorised use, alteration, or interference with a computer system or its software or data, whether proprietary or written 'in-house', will be regarded as a breach of school policy and may be treated as gross misconduct and that in some circumstances such a breach may also be a criminal offence.

Copyright, Designs and Patents Act 1988

The Copyright, Designs and Patents Act 1988 provides the legal basis for the protection of intellectual property which includes literary, dramatic, musical and artistic works. The definition of "literary work" covers computer programs and data.

Where computer programs and data are obtained from an external source they remain the property of the originator. Our permission to use the programs or data will be governed by a formal agreement such as a contract or licence.

All copying of software is forbidden by the Act unless it is in accordance with the provisions of the Act and in compliance with the terms and conditions of the respective licence or contract.

The System Manager is responsible for compiling and maintaining an inventory of all software held by the School and for checking it at least annually to ensure that software licences accord with installations. To ensure that we comply with the Copyright, Designs and Patents Act 1988 and in order to satisfy the County Council's responsibilities as a corporate member of FAST (Federation Against Software Theft), users must get prior permission **in writing** from the System Manager before copying any software.

The System Manager is responsible for compiling and maintaining an inventory of all software held by the school and for checking it at least annually to ensure that software licences accord with installations.

All users must be given written notice that failure to comply with the provisions of the Act will be regarded as a breach of school policy and may be treated as gross misconduct and may also result in civil or criminal proceedings being taken.

The Telecommunications Act 1984 and 2000

The Telecommunications Act 1984, section 43 makes it an offence to send 'by means of a public telecommunications system, a message or other matter that is grossly offensive or of an indecent, obscene or menacing character'.

The Telecommunications Regulations 2000 impose restrictions on the interception of communications such as e-mail.

Management of the Policy

The Headteacher should allocate sufficient resources each year to ensure the security of the school's ICT systems and to enable users to comply fully with the legal requirements and policies covered in this Policy. If insufficient resources are available to fully implement this policy, then the potential risks must be documented and reported to Governors.

Suitable training for all ICT users and documentation to promote the proper use of ICT systems will be provided. Users will also be given adequate information on the policies, procedures and facilities to help safeguard these systems and related data. A record of the training provided through the school to each individual user will be maintained.

In addition, users will be made aware of the value and importance of such ICT systems and data, particularly data of a confidential or sensitive nature, and be made aware of their personal responsibilities for ICT security.

To help achieve these aims, the relevant parts of the ICT Security Policy and any other information on the use of particular facilities and techniques to protect the systems or data will be disseminated to users.

The Headteacher must ensure that adequate procedures are established in respect of the ICT security implications of personnel changes. Suitable measures should be applied that provide for continuity of ICT security when staff vacate or occupy a post. These measures as a minimum must include:-

- a record that new staff have been issued with, have read the appropriate documentation relating to ICT security, and have signed the list of rules;
- a record of the access rights to systems granted to an individual user and their limitations on the use of the data in relation to the data protection registrations in place;
- a record that those rights have been amended or withdrawn due to a change to responsibilities or termination of employment;

Physical Security

Location Access

Adequate consideration has been given to the physical security of the rooms containing ICT equipment (including associated cabling). Our administration and curriculum server rooms are locked at the end of the day. It is impossible to lock them when they are left unattended as they are rooms, which are regularly used. However, they are both password protected and no unauthorised users have access to them. It is not practical to allow only authorised persons into rooms that contain servers or provide access to data. The System Manager must ensure appropriate arrangements are applied for the removal of any ICT equipment from its normal location. These arrangements should take into consideration the risks associated with the removal and the impact these risks might have.

Equipment siting

Reasonable care must be taken in the siting of computer screens, keyboards, printers or other similar devices. Wherever possible, and depending upon the sensitivity of the data, users should observe the following precautions:-

- devices are positioned in such a way that information stored or being processed cannot be viewed by persons not authorised to know the information. Specific consideration should be given to the siting of devices on which confidential or sensitive information is processed or retrieved;
- equipment is sited to avoid environmental damage from causes such as dust & heat;
- users have been instructed to avoid leaving computers logged-on when unattended if unauthorised access to the data held can be gained. Clear written instructions to this effect should be given to users;
- users have been instructed not to leave hard copies of sensitive data unattended on desks;

The same rules apply to official equipment in use at a user's home.

Inventory

The Headteacher, in accordance with the School's Financial Regulations, shall ensure that an inventory of all ICT equipment (however financed) is maintained and all items accounted for at least annually.

System Security

Password Policy

Passwords should be:

- unique
- alphanumeric
- at least 6 digits in length
- regularly changed, recommend at least every 90 days

Passwords should NOT be:

- written down
- easy to guess

Monitoring Computer Use by Pupils

- Ensure Pupil use of computers is 'visual', make sure there is a responsible person present and monitoring use.
- Children's log on allows limited access.
- Review the layout of the room to ensure there is good 'visibility' of computer activities
- Ensure there is supervision at all times
- Publish the 'Rules of ICT Use' next to the computers, or consider displaying them on the screen when the computer is turned on

- Maintain an audit trail of User activity through accessing temporary files, document history and document areas.
- We use Policy Central Enterprise to flag up any inappropriate searching and activity which targets who was logged on at the time.

Monitoring Computer Use by Staff (especially in sensitive areas)

- Use screensavers with passwords
- Using 'distinctive' background colours through personalised backgrounds.
- Think carefully about the siting / location of equipment
- Take care when disposing of paper output, discs, computers etc. that may contain sensitive or personal information
- We use Policy Central Enterprise to flag up any inappropriate searching and activity which targets who was logged on at the time.

System Backup

- Make sure the system is backed up regularly and checks are made that the backup has worked
- Make sure the instructions for re-installing data or files from a backup are fully documented and readily available
- Use an automated, 'off-site' storage for backup where possible – curriculum server.
- Consider using different media as a secondary backup facility.

Anti Virus Protection

- We always use an approved and recommended product – For all machines attached to the administration server we use Sophos. For all curriculum machines and staff laptops we use Eset antivirus business edition.
- As soon as a new piece of hardware is installed we ensure that our anti-virus product is put on and a new licence bought.
- Eset updates daily with new virus definitions and Sophos updates regularly and is the programme installed by Staffordshire County Council. This includes all equipment. We have no stand-alone PC's, and it includes laptops and PC's used at home
- We have a clear procedure for dealing with any actual or suspected infections. The anti-virus software should detect and automatically clean or quarantine a virus, however if we have an actual infection on a system it will immediately be disconnected from the network and sent for virus removal. If it is a suspected virus the system manager will run a full system scan and again, if positive, be disconnected immediately and sent for virus removal, if negative then support will be sought to identify why we have a suspected virus.

Illegal or Inappropriate Use of the Network

- Make sure there are appropriate procedures in place for auditing access to the network and systems
- Regularly check the network for 'unauthorised' files
- If possible ensure auditing is performed both at the Management System level and also at the Operating System level (see section 11 below)
- Consider using appropriate software to assist with auditing - this can help monitor activities such as logons, file usage etc.
- Consider using a firewall or proxy server to restrict external activity and access.

Internet Use / Filtering

- Make sure an Internet Use policy has been adopted for each 'category' of User and all Users have signed up to it
- Define and document any local agreements / policies on restricting web sites, access to newsgroups and chat-rooms etc.
- Obtain parental permission at the beginning of the year – each year.
- Ensure there is a clear process for reporting any access to inappropriate material
- Staff check before downloading of .exe files, or other specific functions where alterations are made to system.
- Publish safe guidelines
- Make sure Internet use is supervised

Email Use

- Make sure an Email Use policy has been adopted for each 'category' of User and all Users have signed up to it.

- Define and document any local policy on the use of email and email addresses, including the use of 'non-approved' email accounts
- Consider implementing limits on inbox sizes, size and types of attachments etc
- Be clear about what is considered 'appropriate' use of email and language
- Involve staff, parents and students in these decisions

Documentation

Ensure adequate documentation is available for

- The network infrastructure
- The network systems, hardware, software etc.
- Administration procedures
- Housekeeping procedures
- Problem resolution

Ensure support disks, recovery disks, backups etc are available

Training

- Ensure there is adequate training for System Managers and Users
- Introduce 'good practice' guidelines where appropriate e.g. using screen savers with passwords

Authentication / Operating System Level Security

- Consider using system policies to provide additional security.
- Ensure there is a rigorous policy for approval / removal of Users – new users must be added by system manager and will only be a new member of staff or child.
- Avoid the use of 'generic' accounts, where their use is unavoidable set up only for the duration of the particular requirement.
- Limit the number of Administrator and Manager accounts. 1 account is held and only known by the system managers and Headteacher.
- Avoid the use of Groups with Administrator or Manager rights.
- Only log on as Administrator or Manager when performing functions requiring this level of access, use an ordinary level User account where this is not required.
- Set clear security levels on the network and ensure these are documented and followed.
- Restrict access to applications and data areas where appropriate.
- Consider using 'read only' access where possible.

Network Review

- Monitor system downtime, ensure there are support arrangements in place to react to problems with critical equipment or infrastructure.
- Monitor performance of the network - ensure there is a process in place to develop and upgrade the network infrastructure and equipment as necessary.
- Monitor service disruption - ensure support arrangements are in place to resolve problems in a timely fashion.
- Regularly review appropriate documents e.g. Computer Security policy, Email and Internet Use policies, this could include reviewing official documents such as the BECTa 'Superhighway Safety'.
- Review procedures for dealing with all security breaches or compromises, whether deliberate or innocent.

Monitoring Systems Usage

- Monitoring of data on a school network could contravene Article 8 of the European Convention of Human Rights and Fundamental Freedoms, e.g. the right to respect for private and family life, which is protected by the Human Rights Act 1998. The Telecommunications (Lawful Practice) (Interception of Communications) Regulations 2000 also limit monitoring. The 2000 Regulations apply to all forms of electronic monitoring and interception irrespective of whether the material monitored is generated by private use or in the course of the school's day to day activities.
- A school may only monitor authorised private use of a computer system if it can justify monitoring on the basis that it is lawful, necessary and in the interests of amongst other things, the protection of health or morals or for the protection of the rights and freedoms of others. Schools should ensure that the monitoring is not out of proportion to the harm that could be done if the monitoring did not take place.
- Schools could start by banning private use of a school's computer system, but then allow private use following application to the head teacher. The Rules for Email and Internet Use, which every

user must agree to, contain a paragraph that should ensure users are aware that the school is monitoring use.

- In order to defend claims that it has breached either the 2000 Regulations or the Human Rights Act 1998, a school should devise procedures for monitoring, ensure monitoring is supervised by a senior manager and maintain a log of that monitoring.

Legitimate Use

The school's ICT facilities must not be used in any way that breaks the law or breaches County Council standards.

Such breaches include, but are not limited to:-

- making, distributing or using unlicensed software or data;
- making or sending threatening, offensive, or harassing messages;
- creating, possessing or distributing obscene material;
- unauthorised private use of the school's computer facilities.

Private Hardware & Software

Dangers can occur from the use of unlicensed software and software infected with a computer virus. It is therefore vital that any private software permitted to be used on the school's equipment is acquired from a responsible source and is used strictly in accordance with the terms of the licence. The use of all private hardware for school purposes must be approved by the System Manager. As a general rule we seriously discourage the use of private software.

Software

Installing / Copying. Staff have been informed that they should not install or copy software without advice from system managers. No software is copied unless it is acceptable to do so under the licence. Staff check before downloading of .exe files, or other specific functions where alterations are made to system.

ICT Security Facilities

The school's ICT systems and data will be protected using appropriate security arrangements outlined in the rest of this section. In addition consideration should also be given to including appropriate processing controls such as audit trails, input validation checks, control totals for output, reports on attempted unauthorised access, etc.

Authorisation

Only persons authorised by the System Manager and added to the list with signature of understanding, are allowed to use the school's ICT systems. The authority given to use a system will be sufficient but not excessive and the authority given must not be exceeded.

Access eligibility will be reviewed continually, including remote access for support. In particular the relevant access capability will be removed when a person leaves the employment of the school. In addition, access codes, user identification codes and authorisation rules will be reviewed whenever a user changes duties.

Access to the County Council Corporate ICT Network

The Headteacher must seek permission on behalf of the school for any ICT system to be linked to the County Council's corporate ICT network. This applies to the access granted to the County Council's systems for financial, payroll and creditor payments purposes and remote access for computer support on the administration network.

Passwords

The level of password control will be defined by the System Manager based on the value and sensitivity of the data involved, including the possible use of "time out" passwords where a terminal/PC is left unused for a defined period.

Passwords for staff users should be changed at least termly and should not be re-used. They should be a minimum of 6 alphanumeric characters and not obviously guessable.

Passwords should be memorised. If an infrequently used password is written down it should be stored securely.

Passwords or screen saver protection should protect access to all ICT systems, including "boot" passwords on PCs, particularly laptop/notebook PCs as they are highly portable and less physically secure.

A password must be changed if it is affected by a suspected or actual breach of security or if there is a possibility that such a breach could occur, such as:-

- when a password holder leaves the school or is transferred to another post;
- when a password may have become known to a person not entitled to know it.

The need to change one or more passwords will be determined by the risk of the security breach.

Users must not reveal their password to anyone, apart from authorised staff. Users who forget their password must request the System Manager issue a new password. Where a password to boot a PC or access an internal network is shared, users must take special care to ensure that it is not disclosed to any person who does not require access to the PC or network.

Backups

In order to ensure that our essential services and facilities are restored as quickly as possible following an ICT system failure, back-up copies of stored data will be taken at regular intervals as determined by the System Manager, dependent upon the importance and quantity of the data concerned.

Backup Strategy

We use a tape drive and mirrored hard drive for our curriculum network and a second hard disc for our administration network.

All data is backed up 5 times each week – weekdays. This means that 5 copies of the data will always be available. At least one of the backups is removed by the secretary and is kept away from the school premises (in case of fire or theft). Regular backups are checked to ensure that they have been successful. (E.g. When the backup has been made to a tape, the contents of the tape are checked to see that a file, or files exist, and that their date of creation is consistent with the date of the backup.) Administration and financial files are backed up each evening and before any reconciling (manual or automatic) is undertaken. A 'Long Term Backup' is taken at the beginning of each term. This is kept and not overwritten until the beginning of the next term. This will help protect against data corruption that goes unnoticed for several weeks, during which 'older' backups will have been overwritten by 'newer' ones.

Security copies are clearly marked as to what they are and when they were taken and stored away from the system to which they relate in a restricted access fireproof location and/or off site.

Instructions for re-installing data or files from backup should be fully documented and security copies should be regularly tested to ensure that they enable the systems/relevant file to be re-loaded in cases of system failure.

The Headteacher, System Managers and School Secretary who ensures back up is completed all understand the instructions for back-up.

Disposal of Waste

Disposal of waste ICT media such as print-outs, floppy diskettes and magnetic tape will be made with due regard to the sensitivity of the information they contain. For example, paper will be shredded if any confidential information from it could be derived.

Disposal of Equipment

Prior to the transfer or disposal of any ICT equipment the System Manager must ensure that any personal data or software is obliterated from the machine if the recipient organisation is not authorised to receive the data. Where the recipient organisation is authorised to receive the data, they must be made aware of the existence of any personal data to enable the requirements of the Data Protection Act to be met. Normal write-off rules as stated in Financial Regulations apply. Any ICT equipment must be disposed of in accordance with WEEE regulations.

Upgrade or Repair of Equipment

If a machine is required to be repaired or upgraded by a third party the significance of any data held must be considered. If data is particularly sensitive it must be removed from hard disks and stored on floppy disk or other media for subsequent reinstallation, if possible, the school will ensure that third parties are currently registered under the Data Protection Act as personnel authorised to see data and as such are bound by the same rules as school staff in relation to not divulging the data or making any unauthorised use of *it*. The same applies for **installations of equipment**. We aim to have installations at a time when it causes least disruption to the system and by a supplier approved by the governors.

Security Incidents

All suspected or actual breaches of ICT security shall be reported to the System Manager or the Headteacher in their absence, who should ensure a speedy and effective response to be made to an ICT security incident, including securing useable evidence of breaches and evidence of any weakness in existing security arrangements. They must also establish the operational or financial requirements to restore the ICT service quickly. N.B. *The Audit Commission's Survey of Computer Fraud and Abuse 1990 revealed that over 50% of incidents of ICT misuse are uncovered accidentally. It is, therefore, important that users are given positive encouragement to be vigilant towards any suspicious event relating to ICT use. It should be recognised that the school and its officers may be open to a legal action for negligence if a person or organisation should suffer as a consequence of a breach of ICT security within the school where insufficient action had been taken to resolve the breach.*

E-Mail & Internet Use Policy

See our attached E-mail & Internet Use Policy. This policy applies to all school staff, students and third parties who use either or both of these facilities. The conditions of use are explained in the policy. All school staff accessing these facilities are issued with a copy of the 'Rules for ICT Users – Staff' and 'E-mail and Internet Use Good Practice' documents and complete the user declaration attached to the policy. For all students, the school will ensure that the relevant 'E-mail and Internet Use Good Practice – Rules for ICT Users - Students' document is issued and the consent form is completed by pupils and their parents. In addition copies of the 'E-mail and Internet Use Good Practice - Rules for ICT Users – Third Parties' document and consent form will be issued to all visitors.

Anti-Virus Policy

We take virus issues seriously at the Forest Federation and the following guidelines limit the probability of our school system being infected.

- We will use appropriate Anti-virus software for all school ICT systems.
- We always use an approved and recommended product – For all machines attached to the administration server we use Sophos. For all curriculum machines and staff laptops we use Eset antivirus business edition.
- All new pieces of hardware are installed with anti virus software. We ensure that our anti-virus product is put on and a new licence bought.

We have a clear procedure for dealing with any actual or suspected infections. The anti-virus software should detect and automatically clean or quarantine a virus, however if we have an actual infection on a system it will immediately be disconnected from the network and sent for virus removal. If it is a suspected virus the system manager will run a full system scan and again, if positive, be disconnected immediately and sent for virus removal, if negative then support will be sought to identify why we have a suspected virus.

We will ensure that every ICT user is aware that any PC with a suspected or actual computer virus infection must be disconnected from the network and be reported immediately to the System Manager who must take appropriate action.

Any third-party laptops not normally connected to the school network must be checked by the System manager for virus's and anti-virus software before being allowed to connect to the network.

Teachers must take the necessary steps to ensure anti-virus protection software on their laptop is updated on a weekly basis as a minimum.

Eset updates daily with new virus definitions and Sophos updates regularly and is the programme installed by Staffordshire County Council. This includes all equipment. We have no stand-alone PC's, and it includes laptops and PC's used at home

Attempts to compromise the security, integrity, or functionality of the system, or possession of tools, while on school property, designed to do so, is a violation of this policy. This includes, but is not limited to: intentional uploading or creation of computer viruses.

- ALL PARENTS AND PUPILS HAVE TO SIGN THE ACCEPTABLE USE RULES AT THE BEGINNING OF EACH YEAR.
- ALL STAFF HAVE TO SIGN THE ACCEPTABLE USE RULES AT THE BEGINNING OF EACH YEAR.
- ALL THIRD PARTIES HAVE TO SIGN THE ACCEPTABLE USE RULES AT THE BEGINNING OF THEY STAY WITHIN THE FOREST FEDERATION.
